

Evolveum

midPoint 4.4

NOVEMBER 2021
DATASHEET

Release date: November 26, 2021

Release type: Long-term support release (LTS)

End of Support: November 26, 2024

Introduction

Nowadays companies grow fast and naturally this process is followed by personnel changes, hiring new employees, assigning new roles and creating new projects and tasks very often. All of it brings transformation of business processes, new business rules, policies and active organizational structures. Accordingly, the need to keep all identity information up to date, secure and protected is strong. From technical point of view, it is necessary to set up approval processes, synchronize data, integrate systems, format and transform data, set protocols leading to speeding up IT processes and with efficiency cut IT costs. It is needed to let identity management and identity governance run a dialogue. The way how to manage it is called midPoint.

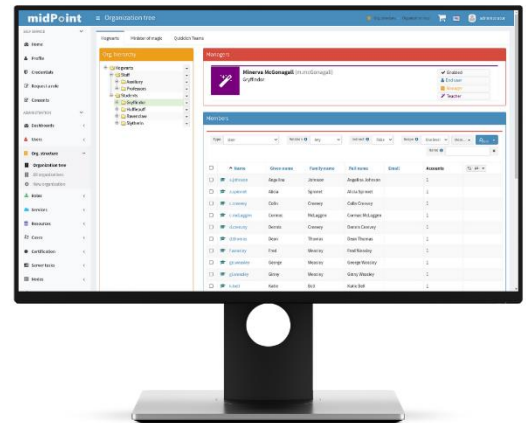

midPoint

MidPoint is unique open source solution combining identity management and identity governance. It covers both technological and business requirements. Intense development activities guarantee the technologically innovative solution which can work effectively for years. And what makes midPoint so special? The fact that it is an open source product with services covering all customer's needs, it is supported by developers themselves and subscribers have influence on the product roadmap. Timeless open source model allows a completely transparent approach and constantly growing vibrant engineering and business community.

Version 4.4 “Tesla”

Release 4.4 is a thirty-seventh midPoint release code-named Tesla. The 4.4 release brings major performance and scalability improvements implemented in scope of midScale project. In addition to that there are significant user experience and reporting improvements.

What organizations is midPoint suitable for?

Higher Education

Banking

Financial

Telco

Healthcare

Science

Governmental entities

Manufacturing

Nikola Tesla (1856-1943) was a Serbian-American inventor, electrical engineer, mechanical engineer, and futurist. He has experimented with high-voltage, high-frequency electricity, including the iconic Tesla coil. However, his work on alternating current (AC) electric motors and polyphase AC system were perhaps the most consequential. He has made crucial contributions to the design of the modern AC electricity supply system, a system that is a backbone of almost every electrical power supply network in the world. Our world would be a completely different place without the contributions of Nikola Tesla.

As Nikola Tesla built on top of scientists and engineers who came before him, midPoint 4.4 builds on work done during the development of previous midPoint releases, culminating in a release that be used to build a whole new world of identity management and governance. MidPoint 4.4 is focused on **scalability**, it is able to process millions of identities, providing unprecedented performance, **flexibility and manageability** in a seamless open source package. Brand-new repository implementation using native PostgreSQL capabilities provides the power, supported by many performance and diagnostic improvement in almost every part of the code. Overall, midPoint 4.4 is a **release unlike any other**, enabling deployments that were not possible before.

MidPoint's top features

Identity Governance and Administration

Self-Service

Regulations and Compliance

Scalability

Privacy Enhancing Identity Management

Synchronization

Evolveum

Evolveum is an open company with **experience** in the field that reaches back to **2000s**.
