<b>Amount of connected systems:</b>	5 (Active Directory, USVN, Bugzilla, GoogleApps, SEP /proprietary application\)	<b>Size of customization:</b>	Medium
		<b>Operating system:</b>	Windows server 2012 R2 c MS Azure cloud

### When skills of two organizations unite

AMI Praha is a software company providing comprehensive services in the field of enterprise IT solutions and the Internet. Having difficulties with managing access to source control repository and issue tracking system is not so uncommon. It is what midPoint is designed for, to help and simplify all the process.

### Managing identities in the cloud

That is exactly what midPoint was used for here. And it gets even more interesting: the deployment is using latest midPoint feature generic synchronization to synchronize groups and roles between AD and midPoint and propagate roles and permissions to custom system.

### A couple of nice words to warm our hearts

Stanislav Grünfeld, AMI's director of implementation, made us really happy with his opinion about our cooperation: „Thanks to the cooperation with Evolveum, we managed to contact new customers and we can also provide quality and highly competitive solutions”.
