

Evolveum

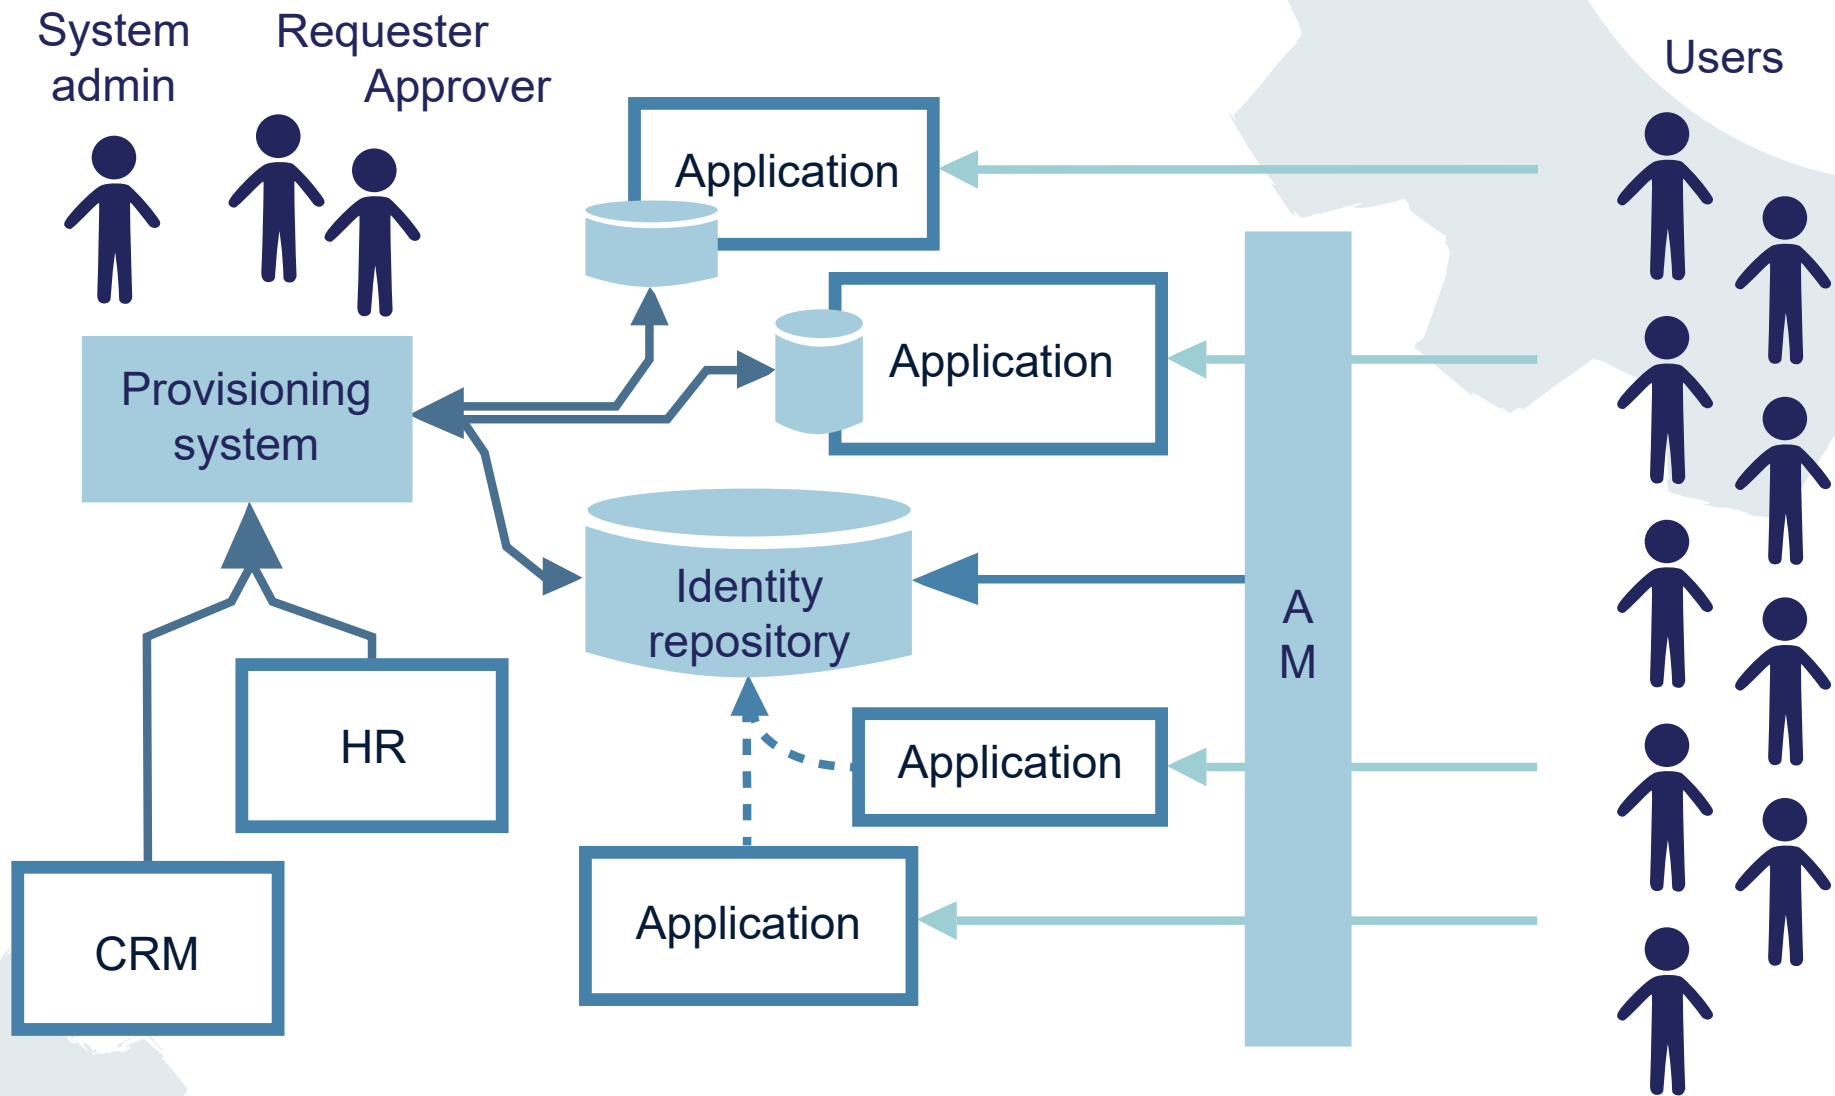

Agenda

- Identity & Access management
- About company
- midPoint
- Clients & partners
- Conclusion

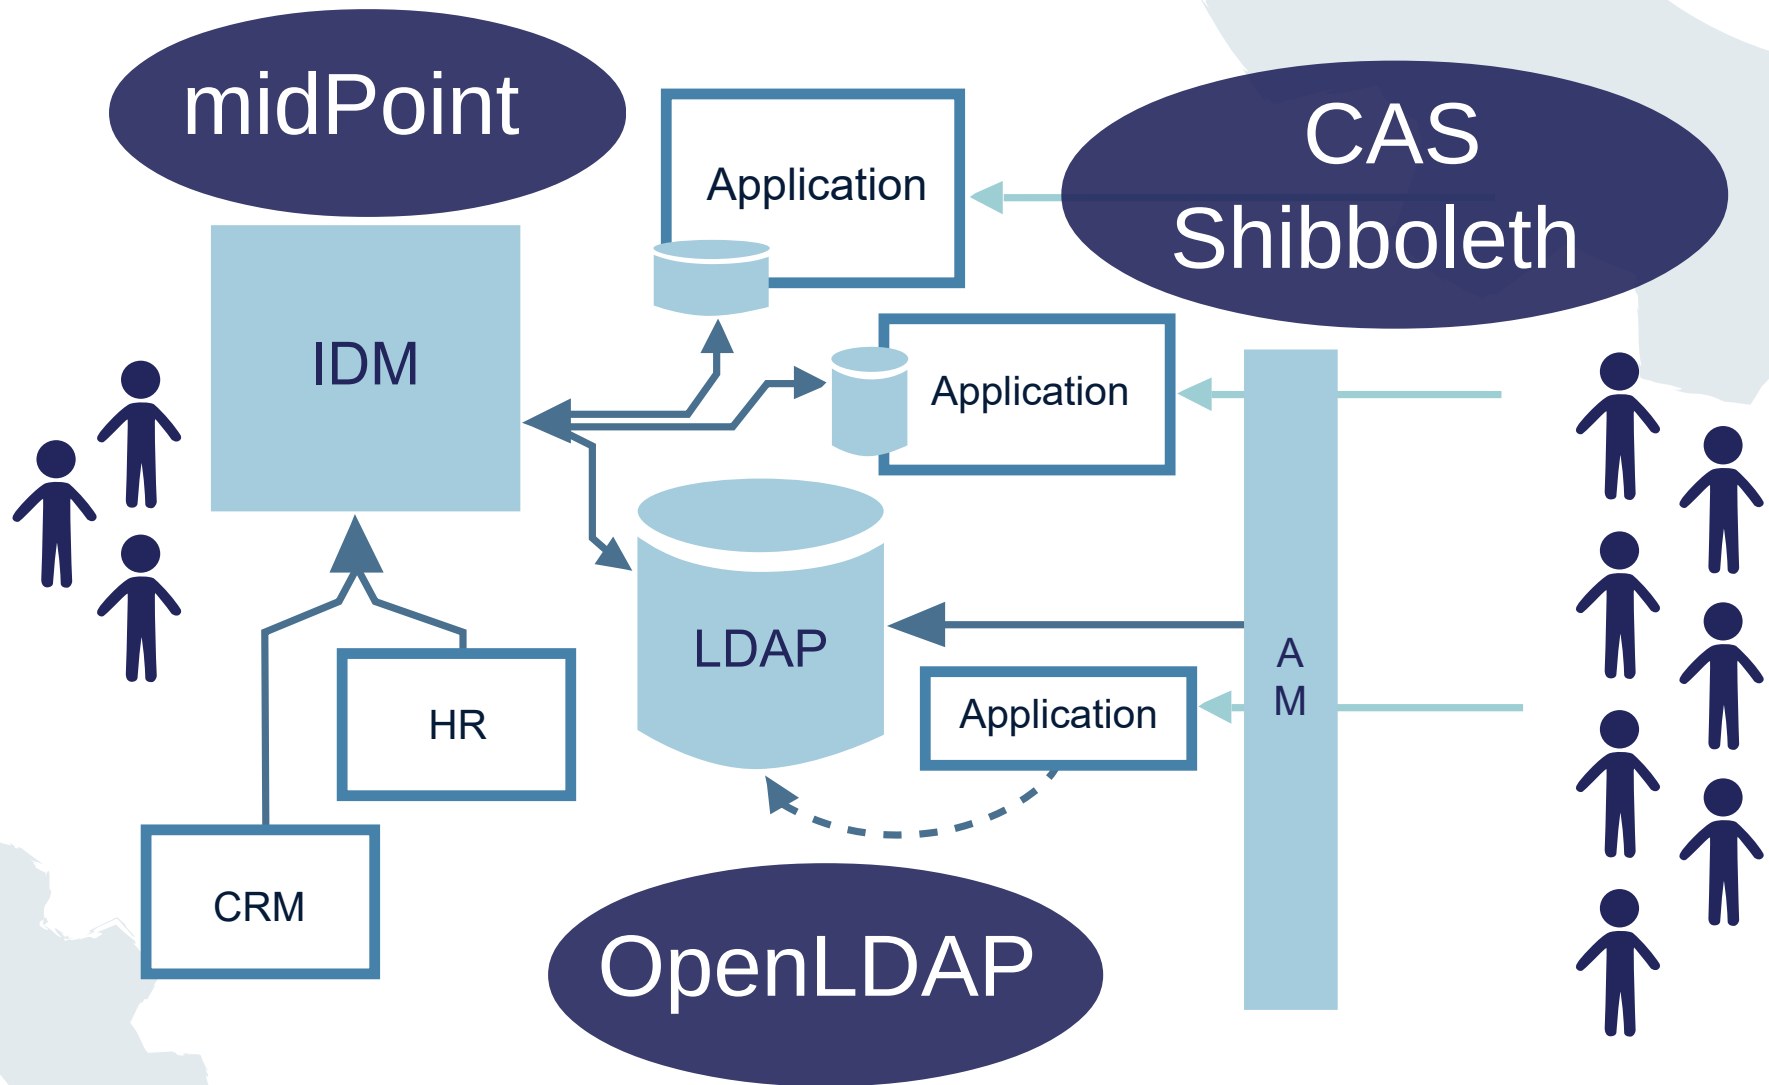

Identity management

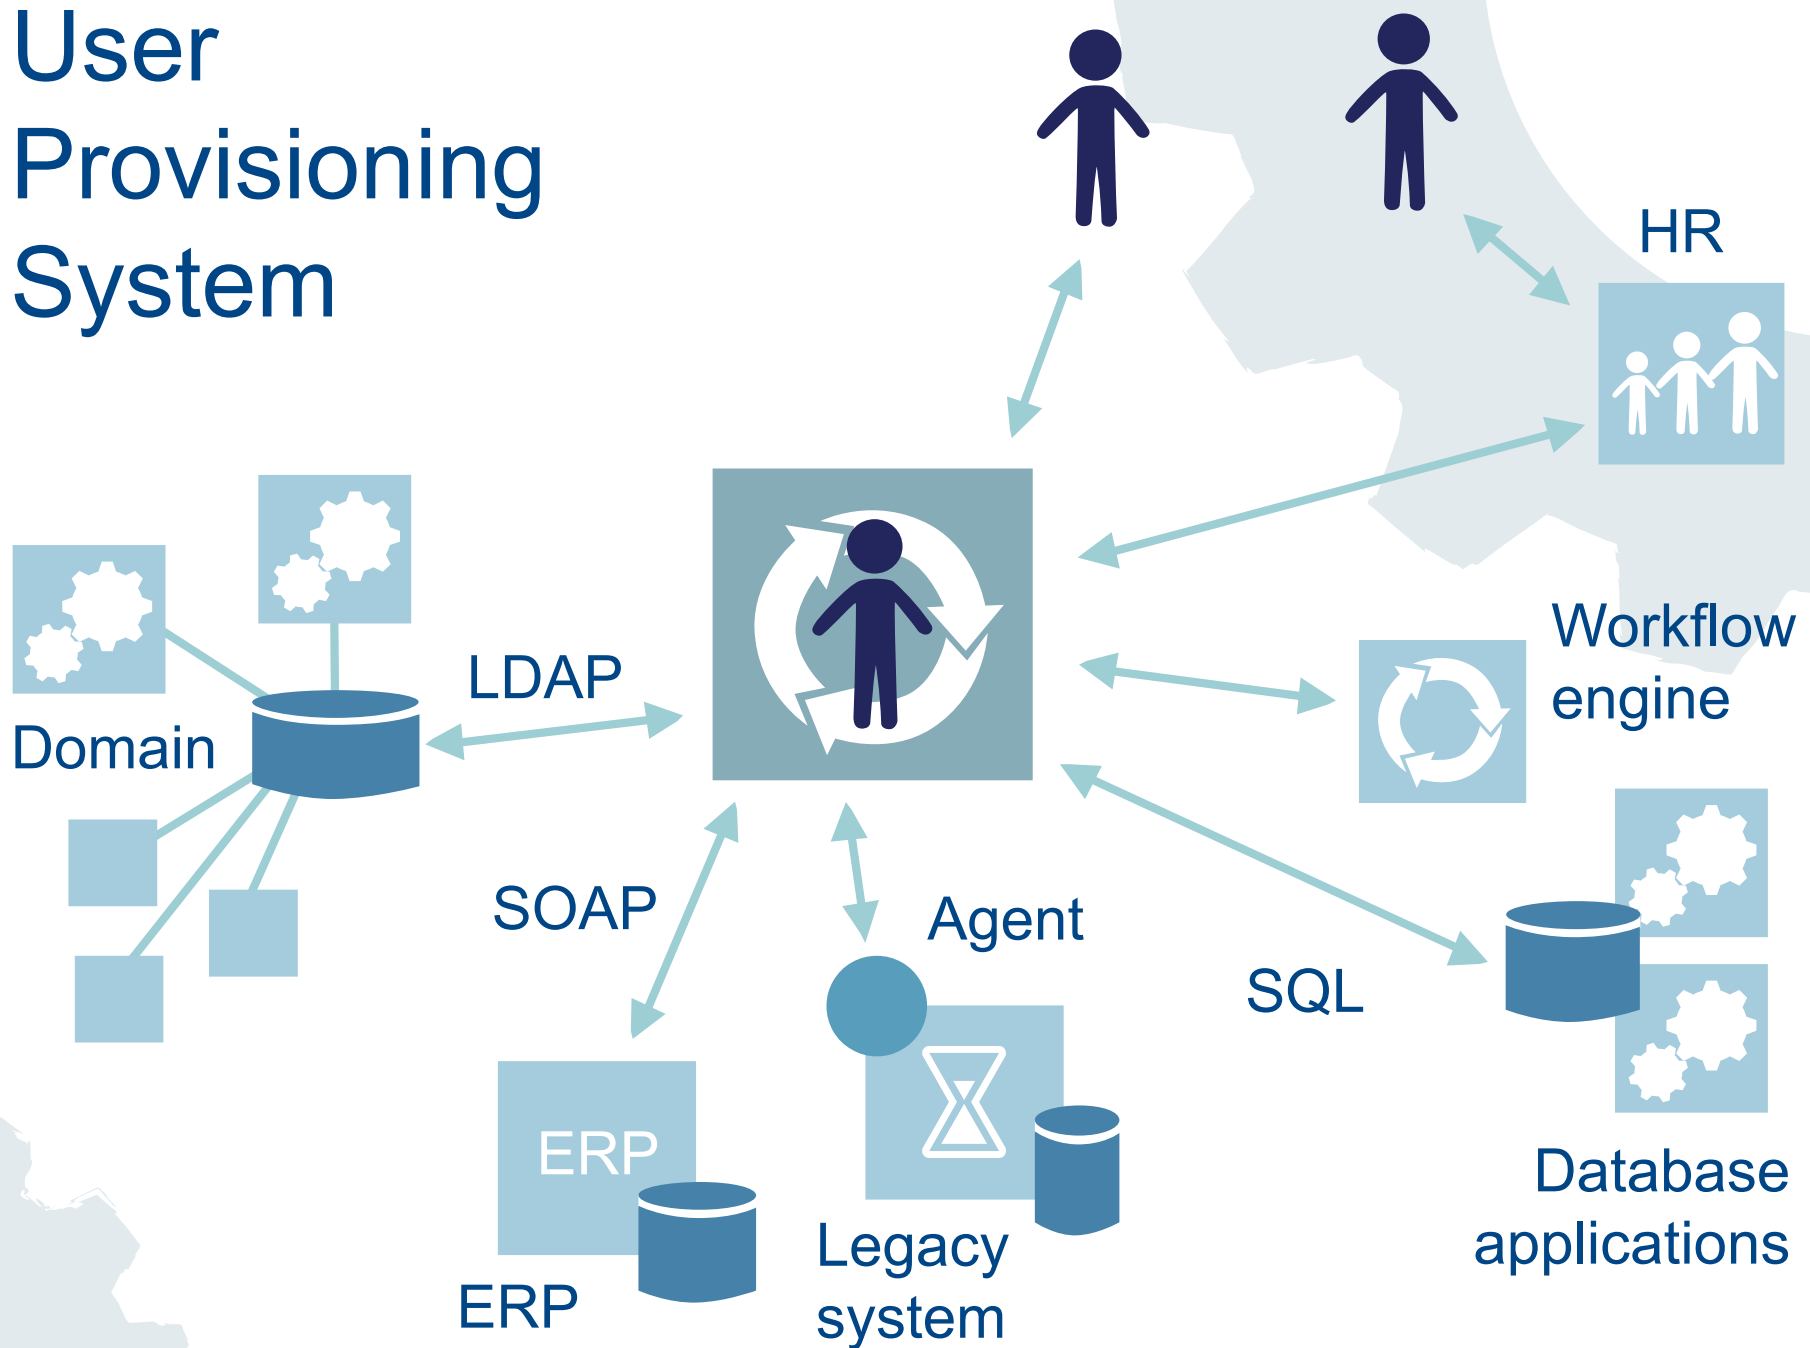

100% Open source solution

Identity management: Provisioning

- Making sure that users have the correct access rights
- Automating the processes of access right management
 - Hiring new employee: creating accounts
 - Reorg: modifications of access privileges
 - Layoffs: deleting/disabling accounts
- Visibility and security
 - Audits, attestations, reporting

User Provisioning System

How does IAM help?

A large, light blue gear graphic is positioned in the upper right corner of the slide, partially overlapping the title area.

- **Saves money**

- Cheaper audits, less sysadmin overhead, lower callcenter load

- **Improves efficiency**

- Faster time to market, minimizes employee wait time

- **Enhances security**

- Visibility, faster incident responses, cheaper investigation

- **Chaos is reduced**

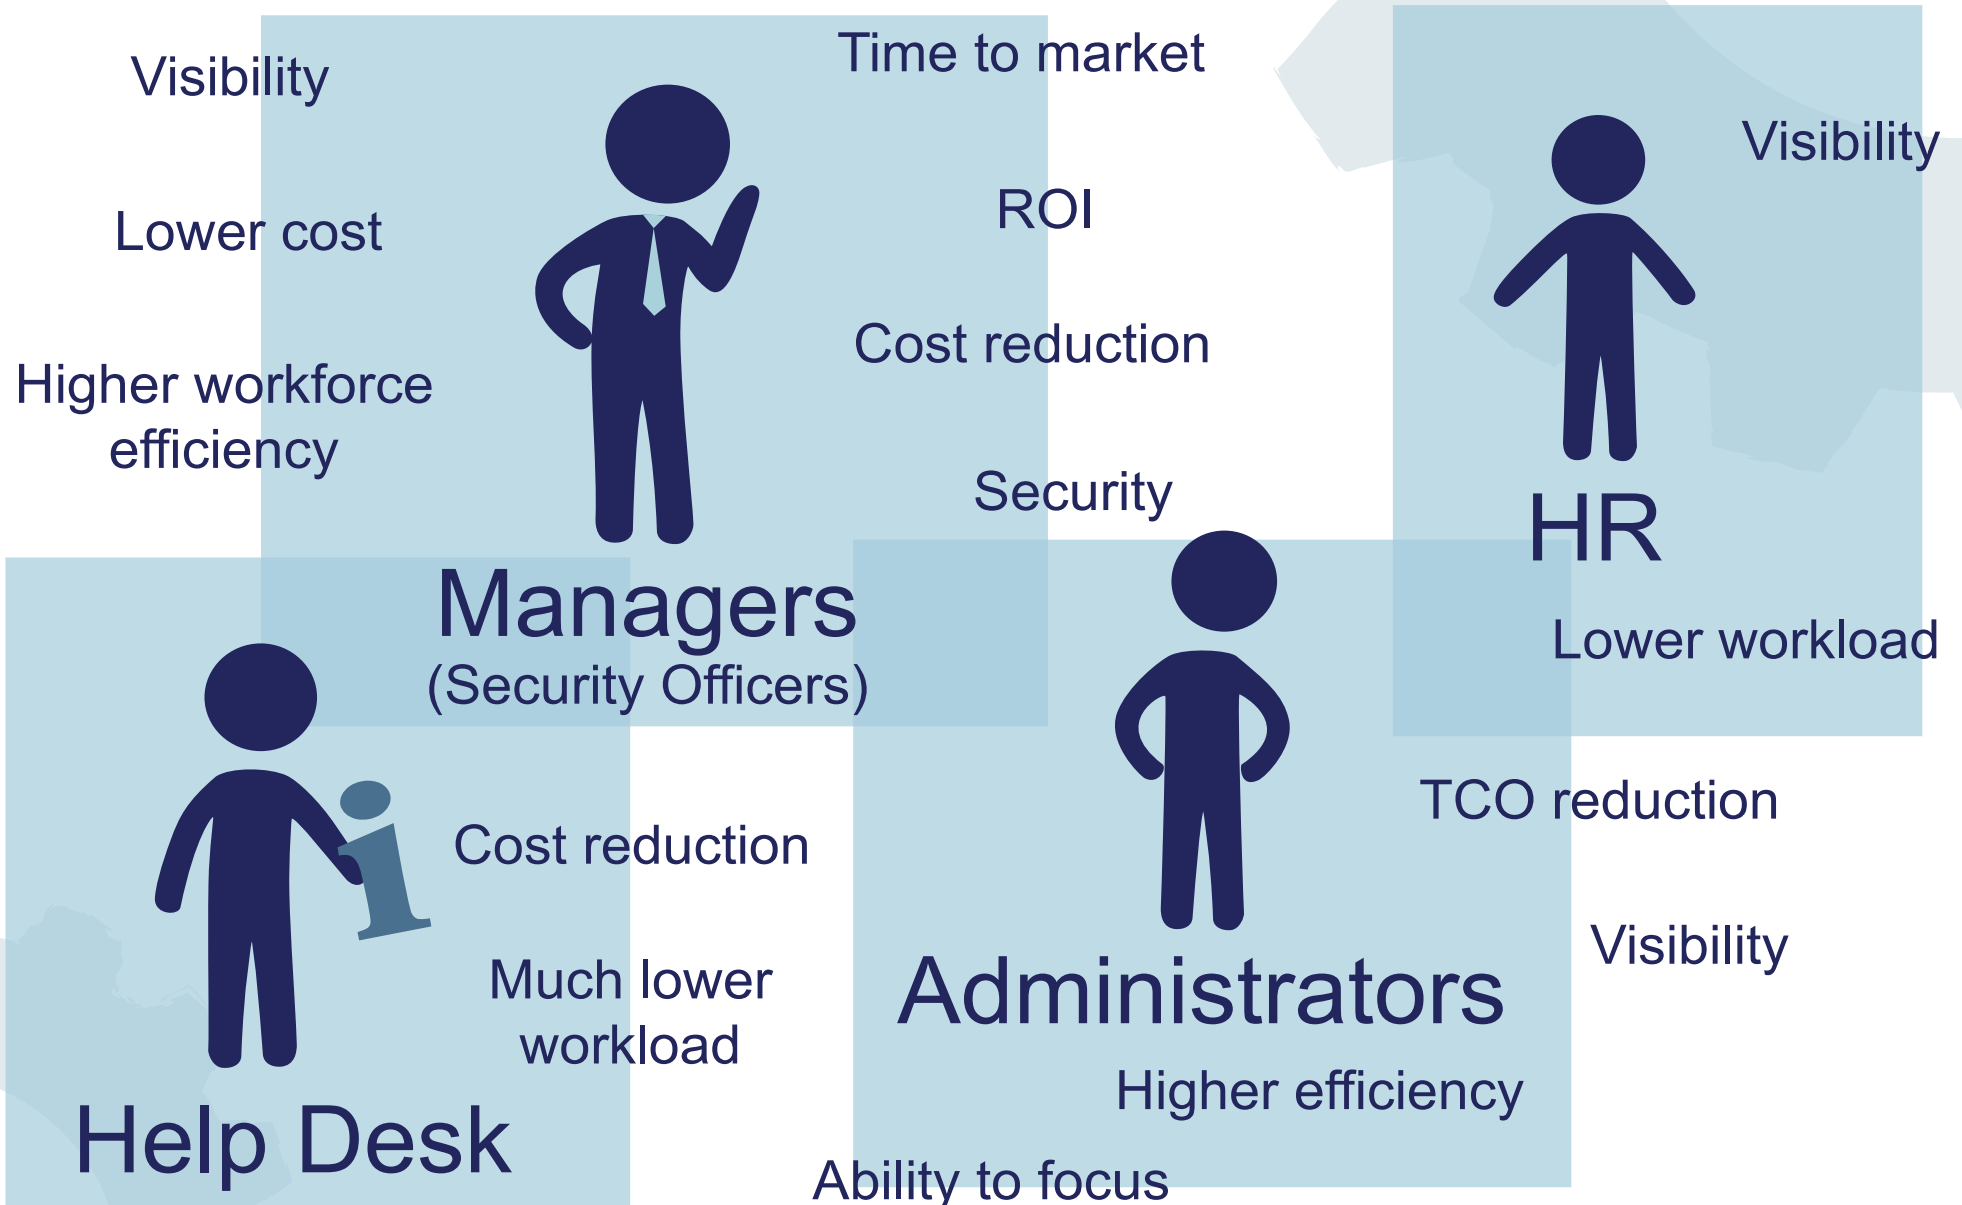

A light blue gear graphic is positioned in the lower left corner of the slide, partially overlapping the bottom of the text.

Identity Management

A large, light blue gear graphic is positioned in the upper right corner of the slide, partially overlapping the title area.

- Managing user accounts
 - Create, update, delete, rename, password reset, ...
 - User self-service
 - Password reset, requesting access, ...
 - Driving business processes
 - Approving access requests, ...
 - Auditing and Reporting
 - Who and when approved this account?
 - Who's is this **B1gH4x0r** account?
- 
- A smaller, light blue gear graphic is positioned in the bottom left corner of the slide.

Who can benefit from IAM?

Measurable Benefits (selection)

- Time to get new access rights

3 weeks → 1 day

- Time to reset a password

4 hours → 10 minutes

- Call center load reduction

10-50%

About Evolveum

Evolveum team history

A large, light blue gear graphic is positioned in the upper right corner of the slide, partially overlapping the title. A smaller, similar gear is visible in the bottom left corner.

- since approx. 2000
 - various LDAP and IDM projects, various companies
- since 2004: nLight
 - IDM Professional Services
 - Sun Microsystems, Novell
- 2010-2011: Cooperation with ForgeRock
 - Contributing to OpenIDM v1
- 2011: Evolveum
 - Independent development of midPoint
 - Cooperative business model

Evolveum

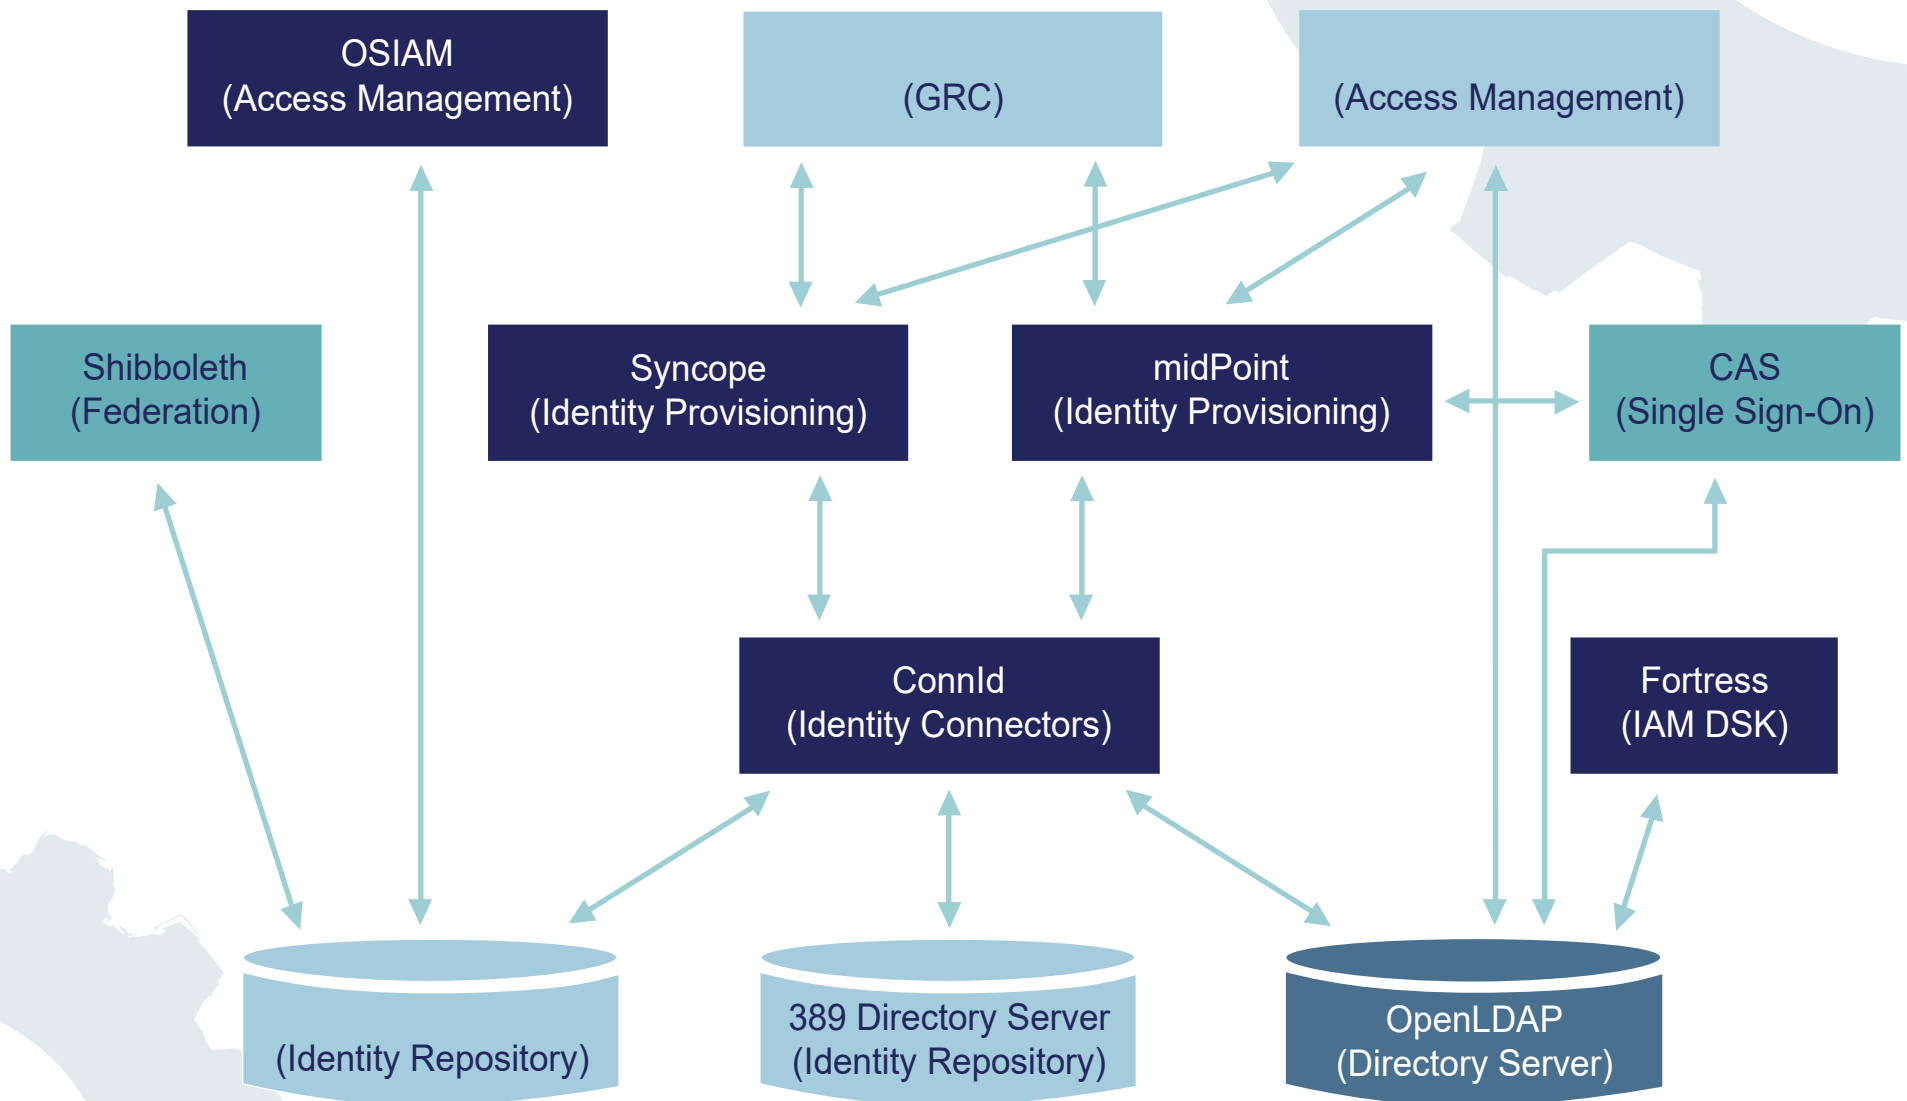

- Focused open source development company
 - Almost all employees are engineers
 - Development and research
 - Minimalistic sales and marketing
 - All team members have academic degree (including 2 PhDs)
 - Indirect partner-based business
 - Customer – Partner – Evolveum
 - Cooperation is the key
- 

Ecosystem

A large, light blue gear graphic is positioned in the upper right corner of the slide, partially overlapping the white background.

- Pure open source model
 - No open-core or dual licencing
 - Contributions are welcome
 - Distributed development
 - Code created by several development teams
 - Coordinated and integrated by Evolveum
 - Evolveum is a maintainer, not “owner” of the code
 - Cooperation instead of domination
 - Evolveum partners add value
 - Cloud, integrated solutions, managed services, extensions, plugins, connectors, ...
 - Trade influence for control to get mutual benefits
- 
- A light blue gear graphic is positioned in the lower left corner of the slide, partially overlapping the white background.

Open Source Identity Ecosystem

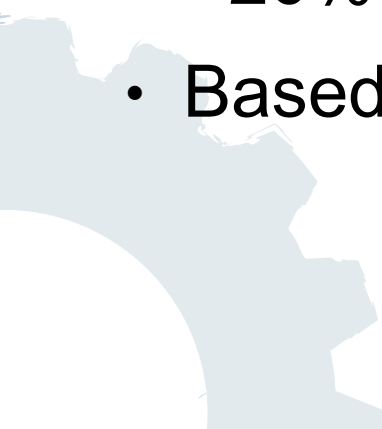

midPoint

The logo for midPoint features the word "midPoint" in a bold, white, sans-serif font. The letter "o" in "Point" is replaced by a white gear icon. The gear is centered within a white target symbol, which consists of a circle with a vertical and horizontal crosshair. The background is a gradient of blue, transitioning from a darker shade on the left to a lighter shade on the right.

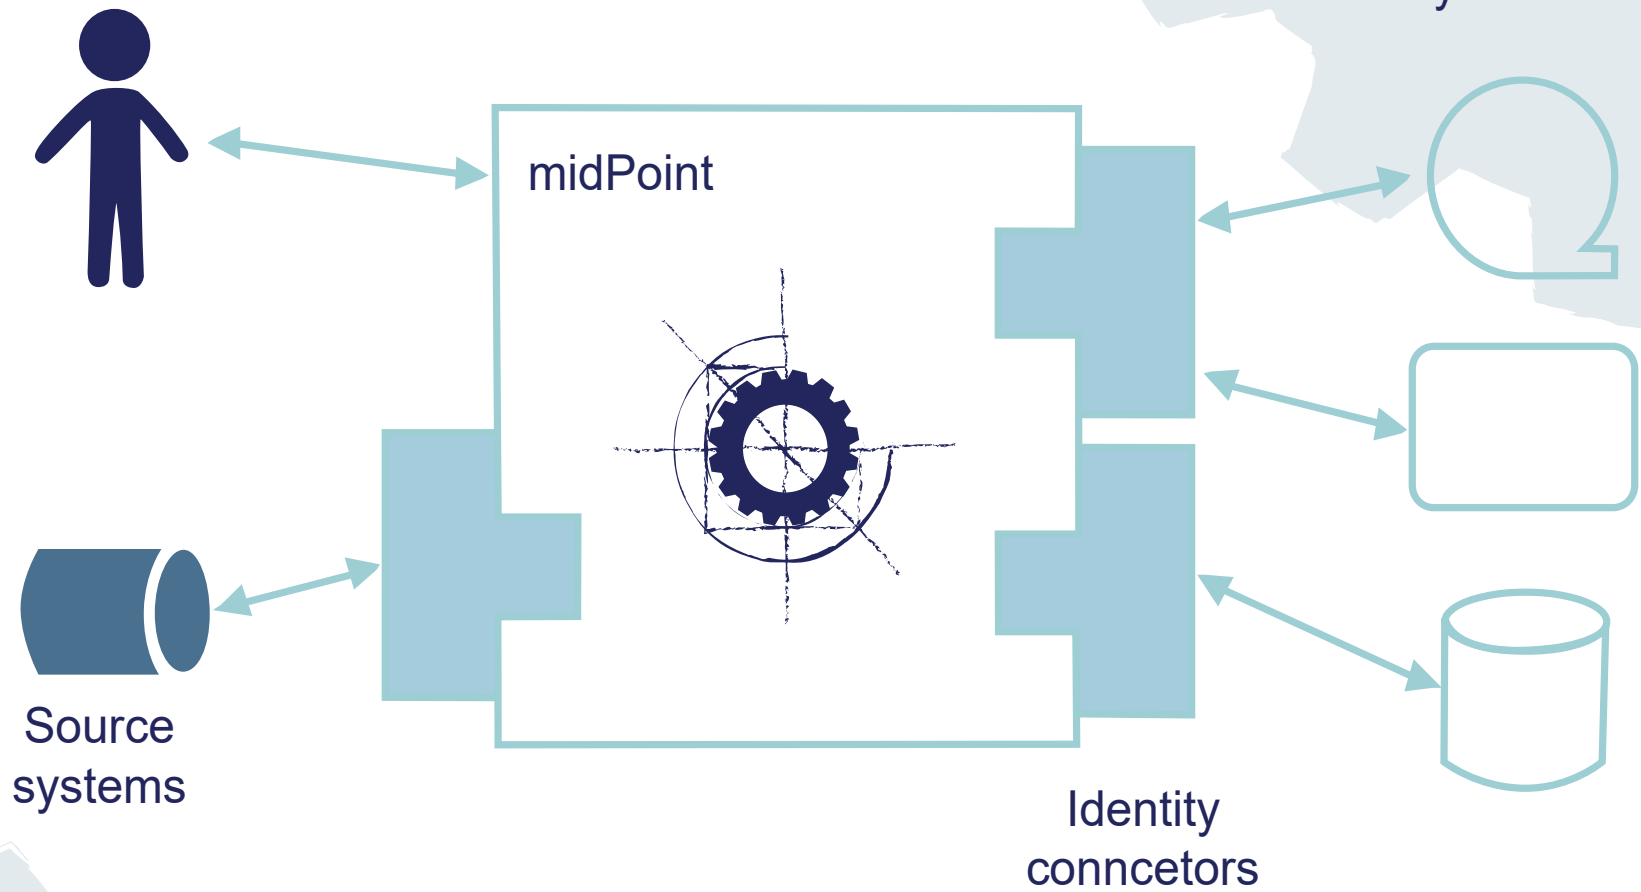

Make the working process smooth by using **OpenSource** identity management system.
Get the work done faster, easier and safe.

MidPoint at glance

- Open-source User Provisioning system
 - 100% open-source, no licence cost, no usage restrictions
 - Next-generation system
 - Open architecture, extensible, standard-based, Java/XML/REST
 - Deployment and maintenance efficiency
 - 20% of effort to get 80% of result
 - Based on a decade of IDM experience
- 

MidPoint big picture

midPoint consists of several parts

- MidPoint core: contains the IDM logic. It is the place where the sophisticated identity management algorithms and policies are implemented.
- Identity connectors: the integration “drivers” that connect midPoint to source and target systems (resources)
- Administration console: a web-based user interface that can be used to configure and manage midPoint. It can also be used for delegated administration, end-user self-service, workflow (approvals), etc.

Unique features

- Advanced RBAC: support of hierarchical, conditional or parametric roles
- Flexible organizational structure support: can model almost any organizational structure as long as it is a acyclic oriented graph.
- Self-healing and resilient system: can automatically heal data inconsistencies whenever they are discovered.
- Generic synchronization: allows to synchronize almost any object, not just users and accounts.
- Adaptivity: if a custom property is added to the user schema then all the other system components automatically adapt.
- Customizable using standardized high-level languages: There are no proprietary languages that lead to vendor lock-in.
- Clean extensible architecture: A proper component-based system decomposition documented using UML diagrams.
- Openness: midPoint is designed, built, developed and maintained entirely in an open fashion. No part of midPoint is closed or kept secret.

midPoint in numbers

A large, light blue gear graphic is positioned in the upper right corner of the slide, partially overlapping the title and the list of statistics.

- At least 13 years of IDM experience
 - At least 11 years of research (12 publications)
 - Almost 5 years of active development (10 releases)
 - More than 460 000 lines of code
 - Estimated project cost: \$ 9 837 844 (COCOMO, openhub.net)
 - Average 200 commits per month (total 8396 commits)
 - More than 3300 automated tests
 - Almost 500 wiki pages containing documentation
- 
- A smaller, light blue gear graphic is positioned in the lower left corner of the slide, partially overlapping the bottom of the list.

Past, present and future

midPoint history

- 2004: nLight – IDM specialist company
 - Mostly Sun IDM (but also other technologies)
 - 2009: Sun acquired by Oracle
 - Death of Sun IDM end of business?
 - Spring 2010: OpenIDMv1
 - nLight cooperating with ForgeRock on OpenIDM development
 - Spring 2011: ForgeRock is changing course
 - OpenIDMv2 plan: drop everything, reinvent everything
 - May 2011: midPoint project start
 - Evolveum established by nLight and others
 - Based on OpenIDMv1 code created by nLight
 - 2012 and on: independent development
 - Still cooperating with ForgeRock (e.g. OpenICF)
- 

Roadmap

- midPoint 2.x RELEASED
 - Basic and some advanced functionality
 - MidPoint 3.0 (Newton) RELEASED
 - Delegated administration, generic sync, REST, ...
 - MidPoint 3.1, 3.1.1 (Sinan) RELEASED
 - Improved GUI, wizards, ...
 - MidPoint 3.2 (Tycho) RELEASED
 - Recertification, synchronization GUI, ...
 - MidPoint 3.3 (Lincoln) RELEASED
 - New GUI & SelfService, Binary attributes support, ...
 - MidPoint 3.4 (Heisenberg) RELEASED
 - GUI usability features and customizations, production ready certifications, ...
- 

Current State (version 3.4)

A large, light blue gear graphic is positioned in the upper right corner of the slide, partially overlapping the title.

- Access certification (production quality)
 - Entitlement approval support
 - Major GUI improvements
 - Governance features
 - Significant user interface improvements
 - LDAP-based AD connector in full production quality
 - Matching rule for XML-formatted string attributes and UUIDs
 - Full support for Java 8 environment (both build and runtime)
 - Improved documentation
 - And more
- 
- A smaller, light blue gear graphic is positioned in the bottom left corner of the slide.

MidPoint 3.x is revolutionary

A large, light blue gear graphic is positioned in the upper right corner of the slide, partially overlapping the title.

- It goes **beyond** Identity Management
 - Generic Synchronization
 - Synchronize everything with everything
 - Entitlements
 - Support for groups and privileges (PIM)
 - REST (and JSON and YAML later)
 - Delegated Administration
 - Fine-grained authorizations + organizational structure
 - New GUI Look and Feel - Customizable
- 
- A smaller, light blue gear graphic is positioned in the lower left corner of the slide.

Open and dynamic development

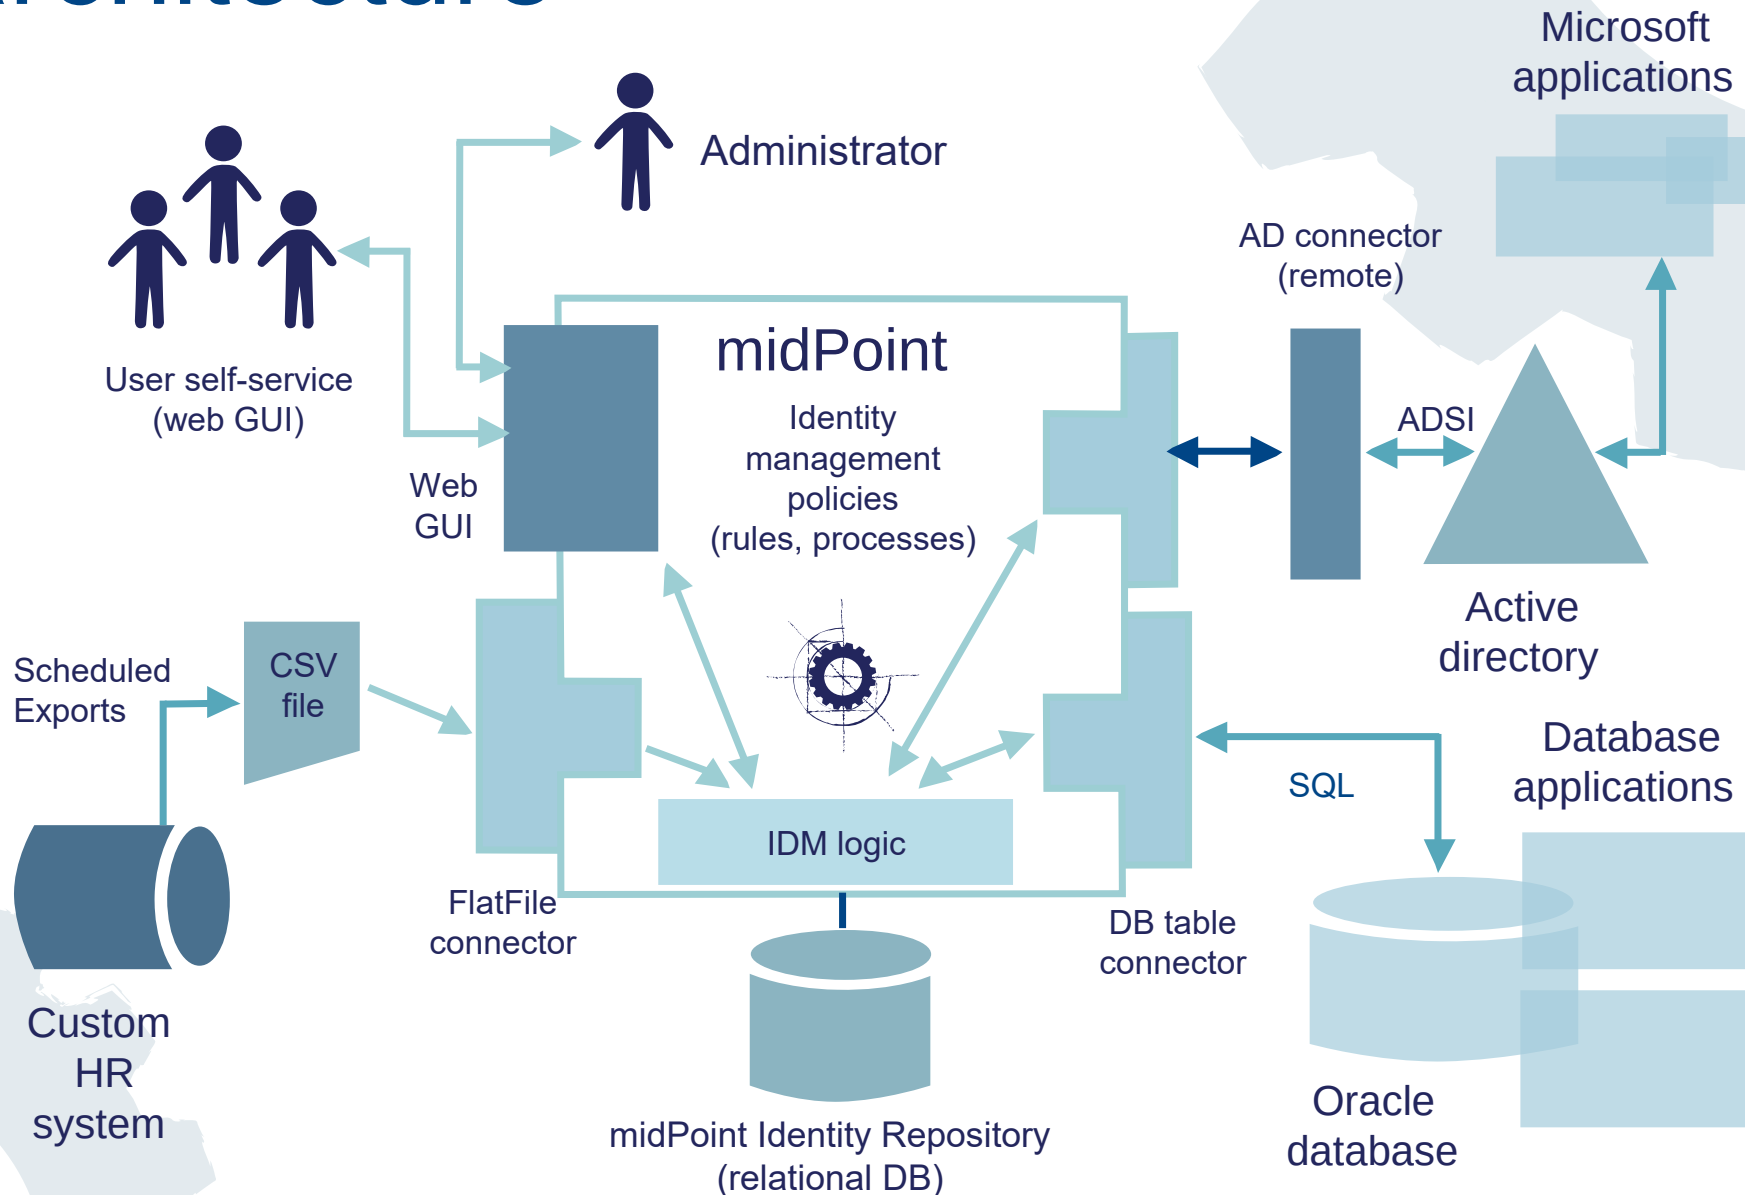

A large, light blue gear graphic is positioned in the background, partially overlapping the title and the list. The gear is oriented with its teeth pointing towards the top right.

- Completely open development
 - Public distributed source code management (git, planned soon)
 - Public task tracking (Jira)
 - Public communication and documentation (mailing lists, wiki)
 - Public planning (roadmap, Jira)
- User (customer) participation
 - (Paying) customers influence roadmap and take precedence
 - MidPoint users can influence the development plan
- Contributions

Role request

The interface is divided into three main sections:

- Available roles (left, green header):** Contains a search bar with "Filter by user" and a red 'x' icon. Below it, a dropdown menu shows "Name: All" with a red 'x' icon and a "More..." dropdown. A search icon is to the right. The list of roles includes "Basic Resource Set", "developer", "Manager", and "operator". At the bottom, a pagination control shows "<<" "<" "1" ">" ">>".
- Parameters (center):** A box labeled "Parameters" with a "+" icon. Below it are two large blue buttons: the top one has a right-pointing arrow, and the bottom one has a left-pointing arrow. At the bottom is a "Reset the list" button.
- Current roles (right, red header):** Contains a search bar with "Name: All" and a red 'x' icon, and a "More..." dropdown. A search icon is to the right. The list of roles includes "developer". At the bottom, a pagination control shows "<<" "<" "1" ">" ">>".

Approve adding Sensitive Role 1 to katkav

Allocated

Requested by: katkav

Requested on: Apr 25, 2016 11:11:39 AM

The image features two large, light blue gear shapes. One gear is positioned in the top right corner, and another is in the bottom left corner. The word "Conclusion" is centered in the middle of the page in a dark blue font.

Conclusion

Conclusion

- Identity Management
 - Goal: Operational efficiency & security (audit)
 - Easy to start, complex to maintain
 - midPoint
 - Commercial open source provisioning system
 - Next generation system: new technologies and unique features
 - Customer influence and participation
-
