INTRODUCTION

Nowadays companies grow fast and naturally this process is followed by personnel changes, hiring new employees, assigning new roles and creating new projects and tasks very often. All of it brings transformation of business processes, new business rules, policies and active organizational structures. Accordingly, the need to keep all identity information up to date, secure and protected is strong.

From technical point of view, it is necessary to set up approval processes, synchronize data, integrate systems, format and transform data, set protocols leading to speeding up IT processes and with efficiency cut IT costs. It is needed to let identity management and identity governance run a dialogue. The way how to manage it is called midPoint.
MIDPOINT

MidPoint is **unique open source solution combining identity management and identity governance**. It covers both **technological and business requirements.**

Intense development activities guarantee the technologically innovative solution which can work effectively for years. And what makes MidPoint so special? The fact that it is an **open source product with services covering all customer's needs**, **it is supported by developers themselves** and subscribers have influence on the product roadmap. Timeless open source model allows a completely transparent approach and constantly growing vibrant engineering and business community.
- > **manage identities**
- > **simplify and automate internal processes**
- > **govern organizations by managing structures of roles and privileges**

Thanks to the **professional approach of the Evolveum core team**, midPoint became a **scalable product** suitable for any organization regardless their size every size of the organization from small to very large. MidPoint is flexible and meet requirements of different organization types. It is ready to **encourage specific needs** and provide professional support channel and maintenance.

Release 4.0

Release 4.0 is a twenty eight midPoint release code-named Gutenberg. The 4.0 release in a major milestone in midpoint development. It brings long-awaited features such as archetypes and support for multiple equivalent accounts. Many internal mechanisms were significantly improved. There is also a number of exciting experimental features. However, perhaps the most important aspect of midPoint 4.0 is the long-term support (LTS). Gutenberg will be supported for many years to come.

Similarly to Gutenberg's printing system, midPoint 4.0 is a revolutionary release. It bring a couple of long-awaited features. However what really matters is a huge amount of improvements and smaller features. Those are designed to work together with existing midPoint features to create a comprehensive and consistent system for identity management and governance. There are also numerous internal improvements and cleanups that enable a long-term maintenance of midPoint 4.0.

Evolveum

Evolveum is an open company with experience in the field that reaches back to 2000. With its high development performance Evolveum constantly works on improvement of its identity & organization management and governance platform midPoint. This progress of midPoint is covered by its 28 releases, which met the needs of its clients.
