

Partner Spotlight: AMI Praha

As a successful system integrator, AMI Praha has been operating on the market since 1996. We asked **Petr Šimek**, the Chief Executive Officer, about their experience with midPoint!

What do you appreciate the most about working with midPoint?

When working with midPoint, what we appreciate the most is the openness of the system, the licensing policy, and the favorable price terms of the product support.

What was the most exciting midPoint project you worked on?

Each project is unique and always interesting. It is certainly worth mentioning the large midPoint projects for the ČEZ Group (250,000 roles and more than 200 integrations to endpoint systems), the Czech Post (70,000 identities), Vodafone, AVAST, E.ON, and many others.

What advice could you offer to someone who is planning to replace their existing IdM?

Do it in stages, no big bang. Invest in the processes that allow you to work with both IDM solutions for some time so you have time to recognize if the new system works with the data sets and processes correctly. We have a vast amount of knowledge when it comes to migrating existing IDM systems to midPoint, and we know that it is a very complex project, even more than green field IDM implementation. Also, user habits and expectations cannot be underestimated.

AMI Praha is a system integrator operating in the ICT security segment that specializes in authentication / authorization processes and access control to information, regardless of the place of storage. AMI Praha has been integrating midPoint into their customer's IAM infrastructure since 2015.
